"as/IN investors/NNS anticipate/VBP a/DT recovery/NN"

- Features für Regeln:
 - Wort (maximaler Abstand = 2), Wort-Bigramme, Wort-Trigramme
 - POS-Tags (maximaler Abstand = 2), POS-Tag-Bigramme
 - Suffix (Buchstaben-n-Gramme) (n=2-5)
 - (Kombinationen)
- Beispiel: "as/IN investors/NNS anticipate/VBP a/DT recovery/NN"
- Features für "anticipate/VBP": ?

- Features für Regeln:
 - Wort (maximaler Abstand = 2), Wort-Bigramme, Wort-Trigramme
 - POS-Tags (maximaler Abstand = 2), POS-Tag-Bigramme
 - Suffix (Buchstaben-n-Gramme) (n=2-5)
 - (Kombinationen)
- Beispiel: "as/IN investors/NNS anticipate/VBP a/DT recovery/NN"
- Features für "anticipate/VBP":
 - Position 0: "anticipate", "VBP", "te", "ate", "pate", "ipate"
 - Position -1: "investors", "NNS" // "investors" "anticipate" "NNS VBP"
 - "IN NSS", "NNS VBP", "investors anticipate", "anticipate a", usw.

→ Regel-Templates

Template	Example
#2: if previous1 st Word == "object.previous1 st Word" then tag = "correctTag"	(13)
#3: if word == "object.word" then tag = "correctTag"	(5)
#4: if next1st Word == "object.next1st Word" then tag = "correctTag"	(7)
#10: if word == "object.word" && next2 nd Word == "object.next2 nd Word" then tag = "correctTag"	(9)
#15: if previous1st Tag == "object.previous1st Tag" then tag = "correctTag"	(4)
#20: if previous1st Tag == "object.previous1st Tag" && next1st Tag == "object.next1st Tag" then tag = "correctTag"	(11)

- Aufbau: inkrementelles Hinzufügen von Regeln zum Entscheidungsbaum bei Fehlklassifikation (except – if-not)
- Auswahl der konkreten Regel:
 - Regel darf nicht für bereits korrekt klassifierte Vorkommen anwendbar sein
 - Score: korrekte falsch klassifizierte Vorkommen (mit Threshold)
